Jcamera: NTCP, USB, PTP and Java

Paul Hubbard
April 15, 2004
What is jcamera?
Why is this useful?

• Remote-controlled camera + movable base is useful for slow experiments; e.g. crack formation.

• Demonstration of
  • Re-use of misnamed ‘Labview plugin’ with a different language
  • Use of NTCP for control of completely different hardware
Useful variations

• Have jcamera write frames into the data turbine
  • WebDAV or via the API
• Stream low-res images for alignment, telepresence.
  • Work with Olympus at UMN
Current status

- Code is in CVS, but needs to get put into its own project
- Need to writeup the patch for jphoto and submit it to the author
- Haven’t done the turbine integration yet
- Only tested with Nikon 5700
- Need to document all of this and post to the web
