# nclient demo with the MCS shake table

Paul Hubbard
April 15, 20004

What's the demo?

Notes and such

- NTCP sends a single event ('Move X +10') and the Anco control program on the LabVIEW PC interprets it as 'replay the Sylmar earthquake, please'

  - NTCP does single-point moves

- Have to restart the NTCP container between runs; this is likely an error in my NTCP client code.

- All code in CVS

Current status

- Need to add and test security

- Update to new version of Globus toolkit (3.2)
